

ABHISHEK JOSHI

Delhi, India — +91 9667148668 — abhishekjoshi.739.ak@gmail.com

[LinkedIn](#) — [GitHub](#) — [LeetCode](#) — [Twitter](#)

Education

Maharaja Agrasen Institute of Technology, Delhi

Aug 2022 – May 2026

B.Tech in Electrical and Electronics Engineering — CGPA: 7.65 (4th Year)

Class 12: 88.2%

Skills Summary

Languages/Frameworks: JavaScript, TypeScript, Next.js, React, Node.js, Express, Tailwind CSS

AI & Automation: LangChain, LangGraph, LangSmith, n8n, Playwright, OpenClaw

Databases & Tools: MongoDB, PostgreSQL, Prisma ORM, Firebase, SupaBase, Git, VS Code

Experience

Full Stack & AI Automation Intern — Excellence Technologies

Nov 2025 – Apr 2026

- **Spearheaded** an AI automation engine utilizing **LangChain** to read data from Lark sheets and generate automated job sheets, reducing manual job sheet creation for clients by **85%**.
- **Engineered** a multi-site synchronization tool, automating API-driven data injection across **5+ distinct solar platforms** and saving **12+ hours weekly** of manual workflows.
- **Architected** the backend of the enterprise HR Management System using **Next.js**, streamlining data flow for **200+ employees** and designing a Role-Based Access Control (RBAC) system supporting Admin, HR Manager, and Employee tiers.
- **Orchestrated** and deployed production-ready AI Chatbots, establishing real-time tracking via **LangSmith** that boosted debugging efficiency by **40%**.

Software Development Intern — DRC Systems (Remote)

Jul 2025 – Aug 2025

- **Collaborated** within a fast-paced environment, deploying **12+ modular React components** and secure Node.js/Express backend controllers directly to a production codebase.
- **Optimized** error handling workflows and API response structures, decreasing client-facing application error rates by **18%**.
- **Standardized** code formatting in alignment with strict code-review guidelines, accelerating feature development cycles.

Projects

AI Tutor Screener [\[GitHub\]](#) [\[Live\]](#)

- **Architected** a voice-first AI screening platform using React, TypeScript, and Node.js, streaming audio in **200ms chunks** over WebSockets to minimize round-trip processing latency.
- **Implemented** responsive React client-state tracking with automated pre-flight camera/mic diagnostics and a custom **8-second watchdog timer** for intelligent candidate silence detection.
- **Constructed** a multi-table database schema using **Prisma ORM** and **PostgreSQL** (Supabase) to store applicant interview sessions and live-generated speech transcripts for recruiter evaluation.

Suryamap [\[GitHub\]](#) [\[Live\]](#)

- **Designed** and deployed an interactive 3D solar power analytics platform, visualizing over **6 years** of state-wise energy datasets using React and D3.js.
- **Synthesized** dual-mode map visualizations (dynamic interactive map and static generation overlays) to enhance comparative dataset analysis capabilities.
- **Programmed** automated YoY growth algorithms and ranking mechanics to compute the Top 5 performing states.
- **Established** state-level drill-down panels combining tabular grids and graphical charts, delivering granular annual performance reviews for regional power grids.

AI Chatbot with Long-Term & Short-Term Memory [\[GitHub\]](#) [\[Live\]](#)

- **Created** an intelligent conversational agent engineered with short-term context windows and persistent PostgreSQL long-term memory.
- **Integrated** low-latency Socket.IO connections to support real-time response streaming, reducing perceived response latency to under **150ms**.
- **Devised** a custom session management framework using unique identifiers to preserve distinct conversational histories across sessions.

Open Source: Tambo AI [\[GitHub\]](#)

- **Identified** and resolved a runtime schema bug (#1917) in the open-source repository caused by unsupported dynamic key schemas (`z.record()`).
- **Authored** and merged the robust patch into the primary upstream branch, improving tool validation resilience for all platform users.

Certificates

Scaler Academy (Java)

Aug 2024

Covered fundamental syntax, object-oriented programming (OOP) principles, algorithmic patterns, exception handling, and custom database configurations to build robust systems. [\[Certificate\]](#)
